

IMPORTANT CUSTOMER NOTICE

The City of Chibley's Gas Department, as part of its new sales and marketing efforts [with enhanced rebates!], is excited to announce new incentives for our residents who are considering converting to and/or replacing existing natural gas appliances.

The City's Responsibility

The City remains responsible for the construction, operation, maintenance and replacement of all natural gas infrastructure up to, and including, the meter and regulator at each customer's location. As much of this infrastructure is over 50 years old, it requires significant resources to perform all of the required tasks that are designed to ensure the safety and reliability of the natural gas distribution system.

The Customer's Responsibility

Customers remain responsible for, as has always been the case, all piping, venting and appliances that are downstream of the meter. Where in the past the City has been an option to work on Customer-owned equipment, this is no longer the case. The City has established a network of qualified contractors that can assist Customers with any issues that they have on their piping, venting and appliances. Just go to the City's website to find a current listing of qualified contractors. They will be happy to assist you with any gas related repairs and/or installation.

MAINTAINING YOUR FUEL LINES

Buried piping that is not properly maintained may be subject to corrosion, leaks and other safety hazards. This means that buried piping should be checked periodically to ensure continued safe and reliable operation. You (or the building owner) are advised to contact a licensed contractor (see City's website) to assist you in locating and inspecting your buried gas piping. Should an unsafe condition be discovered, repairs should be made immediately.

Please call or visit us online for a list of certified contractors that are qualified to perform repairs, fuel line maintenance and other work beyond your meter.
